

Longmans School Mensuration; With an Additional Chapter and Exercises (Paperback)

Filesize: 6.63 MB

Reviews

Unquestionably, this is actually the very best job by any publisher. It really is basic but unexpected situations within the 50 % from the book. I discovered this book from my dad and i advised this publication to discover.

(Dr. Willis Walter)

Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1897 Excerpt: .for the pyramid. For, as the perimeter of a polygon, inscribed in a circle, becomes the circumference of the circle when the number of the sides of the polygon is increased indefinitely, so the cone may be regarded as a pyramid having for its base a polygon of an indefinite number of sides. Lateral surface of pyramid = perimeter of base x 8ant ne gnt But perimeter of base of polygon)., of indefinite number of sides clrcumference of base of cone.-. Lateral surface of cone = $c \times r = 2\pi r \times r = 2\pi r^2$ And total surface = $\pi r^2 + \pi r h$ These are the results previously obtained. (c) To find the slant height, perpendicular height and radius of the cone being given. Let ABC be the cone. AO = perpendicular height = h. BO = radius of base-r. Then AB = slant height. AOB is a right-angled triangle.-. $AB^2 = OA^2 + OB^2$.-. Slant height = $\sqrt{h^2 + r^2}$ Bule.--Take the square root of the sum of the squares of the perpendicular height and the radius of the base. (d) To find the volume of a cone. The volume of a cone may be obtained from that of the pyramid. For it may be considered as a pyramid having an indefinite number of sides. Therefore the perimeter of the pyramid ultimately becomes the circumference of the cone. /. Volume of a cone = area of the base x one-third of the perpendicular height. Let r =...
